EDUCATION

Seattle University

BS Computer Science (Cum Laude)

Seattle, Washington

September 2018 – December 2020

North Seattle College

AS Computer Science

Seattle, Washington

January 2017 – August 2018

WORK EXPERIENCE

Meridia Land

Senior Backend Engineer – Engine Team

Remote (Amsterdam)

January 2026 – Present

- Designed and scaled backend services for Meridia Verify, a SaaS geospatial data validation platform processing millions of farm plot records across 35+ countries, powering high-throughput ingestion and validation pipelines
- Led the initiative to build an automated benchmark testing runner, executing weekly and on every release with a byte-exact correctness gate and Datadog dashboards.

Nawatech

Full Stack Developer

Jakarta, Indonesia

November 2023 – November 2024, February 2025 – June 2026

- Built and shipped GPT-powered omnichannel chatbots and backend services for enterprise clients across banking, government, and construction, integrating Azure Bot Framework, Qiscus, LINE, and Telegram with custom FastAPI-based orchestration backends
- Developed a natural-language virtual assistant for plantation management, enabling senior executives to monitor harvesting operations, query Power BI dashboards, and trigger operational workflows through conversational interfaces; reduced reporting time by up to 95% through UIPath RPA integration
- Delivered end-to-end web platforms for internal and enterprise use cases, covering HR and project management, search-driven applications with Elasticsearch, government revenue management, and enterprise intranet systems

Traveloka

Software Engineer II – Content Marketing Platform

Jakarta, Indonesia

November 2024 – February 2025

- Built and launched a Digital Asset Management (DAM) system in Java/Spring Boot, centralizing assets across teams and significantly improving the searchability and operational efficiency
- Prototyped AI-powered auto-tagging using Google Vertex AI, improving metadata generation and asset discoverability
- Implemented unit and integration testing (TestNG, Mockito), achieving 80%+ coverage and improving system reliability

Starbucks Corporation

Application Developer I – Service Observability Engineering

Seattle, Washington

July 2021 – November 2022

- Developed microservices-based applications using React, Flask, MongoDB, Docker for internal observability tools
- Automated escalation workflows via Slack bot (Bolt SDK), improving service desk efficiency and cross-team coordination
- Built dashboards tracking health signals across interrelated technology systems, improving incident/outage responsiveness and cutting resolution times by 40%

Microsoft

Software Data Operations Engineer — Microsoft Power BI

Seattle, Washington

February 2021 – July 2021

- Contract position through MAQ Software
- Developed new features and Custom Visuals for reporting capabilities in Power BI Desktop
- Used Power BI to pull data from multiple databases and built a range of interactive dashboards and reports supporting business decision-making

Starbucks Corporation

Application Developer I Intern — Operations Command Center

Seattle, Washington

June 2020 – August 2020

- Expanded capabilities of a critical internal site displaying health status for Starbucks Technology products and services, improving the mean time to respond (MTTR) for outages by more than 20%
- Gathered requirements and designed/implemented key UI and data integration elements
